I-Tip (Stick Tip) Hair Extensions

PROFESSIONAL INSTALLATION & CARE GUIDE

COLD FUSION

100% RAW HUMAN HAIR

NO HEAT · NO GLUE

COOVIP I-Tip (Stick Tip) Hair Extensions are crafted from 100% raw virgin human hair, attached strand-by-strand with a silicone-lined micro-bead using the cold fusion method. No heat, no glue, no chemicals are used during bonding, making this one of the gentlest semi-permanent application methods available. Each strand moves and falls 360 degrees just like natural hair, giving a seamless, undetectable blend.

Specification	Details
Hair Type	100% Raw Virgin Human Hair
Texture	Natural Straight / Soft Wave When Wet
Weight per Strand	~1g (customizable 0.5g - 1g)
Bead / Tip Size	Approx. 0.3cm x 1cm micro-bead
Lengths Available	18in - 24in (45-61cm)
Recommended Amount	100g - 200g (100-200 strands) full head
Application	Cold Fusion - Microbead & Pliers
Heat / Glue	None Required
Move-Up Interval	Every 8-10 Weeks Recommended
Lifespan	2-3 Years With Proper Care
Reusable	Yes - 1 to 3 Re-Applications
Custom Options	Colors, Lengths, Textures, Packaging

Key Advantages

- ✓ **Natural Appearance**
Individual strand application creates a seamless, undetectable blend that moves exactly like your own hair.
- ✓ **Heat-Free & Glue-Free**
Cold fusion microbeads attach without heat or adhesive, minimizing damage to natural hair.
- ✓ **360-Degree Movement**
Round micro-beads allow full natural movement and a soft, lightweight feel at the root.
- ✓ **Reusable & Cost-Effective**
Strands can be removed and re-applied 1-3 times with a fresh set of beads.
- ✓ **Comfortable, Lightweight Wear**
Each bead is so fine that weight is spread evenly, ideal for fine or thin hair.
- ✓ **Fully Customizable**
Available in 100+ shades and lengths, with custom color matching for salons.

How Many Strands Do I Need?

Amount	Strands	Effect	Best For
50g	50-100 strands	Subtle blend & fill	Thin areas, crown top-ups
100g	100-150 strands	Noticeable length & volume	Medium density, full coverage
150g	150-200 strands	Significant volume boost	Thick hair, added length
200g	200+ strands	Full dramatic transformation	Short / coarse hair, major length

Tip: Always leave a 1-2cm shadow zone along the entire hairline. Never place beads flush to the hairline or part - this keeps bonds hidden and prevents scalp tension.

COOVIP HAIR

Step-by-Step Installation

COLD FUSION METHOD | Microbeads & Extension Pliers - No Heat

MICROBEAD METHOD

STRAND BY STRAND

BEGINNER FRIENDLY

01 Section the Hair

Separate the natural hair into two clean horizontal sections using a tail comb. Clip the upper layer away.

02 Grab a Point of Hair

Use the pulling/threading needle to grab a small, even subsection of natural hair close to the scalp.

03 Slide Through the Tube

Slide the natural hair strand through the silicone-lined micro-bead (tube) using the threading loop.

04 Position the Tube

Hold the bead/tube 0.5 to 1.0 inch from the scalp, leaving room for natural growth and movement.

05 Insert the I-Tip Strand

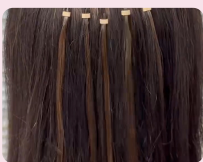

Insert the I-Tip extension's keratin stick tip through the same bead, alongside the natural hair strand.

06 Flatten the Tube

Use extension pliers to clamp and flatten the bead firmly, securing both strands without sliding.

07 Finished - Check the Result

A well-applied bead sits flat, smooth, and roughly 0.5cm from the scalp with no visible gap or pulling. Repeat row by row, working section by section across the entire head.

Tools Required

I-Tip Extension Strands	Pre-bonded keratin stick tips, color-matched and ready to insert
Silicone-Lined Microbeads	Secures natural hair and extension strand without heat or glue
Loop / Threading Needle	Pulls the natural hair section through the micro-bead cleanly
Extension Pliers	Clamps and flattens the bead firmly for a secure, lasting hold
Tail Comb & Sectioning Clips	Clean horizontal sub-sectioning and holds upper layers away

Note: Cold fusion means the natural hair itself is never heated or glued - only the silicone-lined bead is compressed with pliers. For best results and to avoid scalp tension, professional installation is always recommended.

Aftercare, Comparison & FAQ

Keep Your I-Tip Extensions Looking Salon-Fresh

AFTERCARE

COLD FUSION VS K-TIP

FAQ

Care & Styling Guide

Sulfate-Free Shampoo & Deep Conditioner

Wash 2-3x/week with sulfate-free shampoo; deep condition mid-lengths and ends only.

Blow-Dry or Air-Dry

Blow-dry on medium heat near the bead area; air-dry whenever possible to reduce friction.

Dye Darker or Bleach Lighter

100% raw human hair takes color beautifully - have a professional color-match for best results.

Curl, Straighten - Under 160C

Style freely with curling or flat irons, always under 160C (320F) with a heat protectant.

Daily Maintenance Tips

- ✓ **Avoid the Beads**
Keep conditioner and oils away from the micro-bead area to prevent slipping.
- ✓ **Loop Brush Only**
Detangle gently from ends upward; hold near the bead while brushing, no paddle brushes.
- ✓ **Braid Before Bed**
Sleep in a loose braid on a silk or satin pillowcase to reduce tangling and friction.

Removal & Move-Up

No solvent is required for removal: simply open the bead flat again with the extension pliers and slide the strand out, leaving the natural hair undamaged. The same bead can often be reused once; for a fresh, secure hold, replace with a new microbead. Schedule a professional move-up every 8-10 weeks as natural hair grows and the bead position shifts away from the scalp.

I-Tip vs K-Tip (Flat Tip)

Feature	I-Tip	K-Tip
Application	Cold Fusion (Bead)	Hot Fusion (Iron)
Heat / Glue	None	Heat Required
Bond Feel	Round, slightly raised	Flat, lies close to scalp
Reusable	Yes, 1-3 times	No
Best For	Fine to thick hair	Thick, coarse hair

Frequently Asked Questions

Q: How heavy is each strand?

Approximately 1g per strand, with options from 0.5g to 1g depending on desired fullness.

Q: Can I reuse the strands?

Yes. I-Tip strands can typically be removed and re-applied 1 to 3 times with new beads.

Q: Can I color or heat style?

Yes - 100% raw human hair can be curled, straightened, colored, and washed freely under 160C.

Q: Is heat or glue used?

No. I-Tips use a cold fusion microbead method - no heat, glue, or chemicals touch the hair.

Q: How long do they last?

2-3 years of total wear with proper care; each install lasts 8-10 weeks before a move-up.

Q: How much hair do I need?

100g-200g (100-200 strands) is recommended for a full head; 50g works for subtle fill-ins.
