

COOVIP Nano Bead Extensions — 100% Raw Human Hair | Smallest 2mm Bond | No Heat · No Glue

COOVIP Nano Bead Hair Extensions feature the smallest bond available — a 2mm micro nano ring that is virtually invisible once installed. Built on 100% single-donor raw human hair with cuticles fully intact, these extensions deliver unmatched natural movement, shine, and longevity with zero heat and zero glue.

<p><b>SMALLEST BOND</b> 2mm nano ring — invisible once installed</p>	<p><b>NO HEAT · NO GLUE</b> Cold fusion only — gentlest method available</p>	<p><b>100% RAW HUMAN HAIR</b> Single-donor, cuticle-intact naturally tangle-free</p>
--	--	--

<b>Hair Type</b>	100% Raw Single-Donor Human Hair	<b>Texture</b>	Natural Straight / Natural Wave When Wet
<b>Weight/Strand</b>	0.5g – 1g per strand	<b>Bond Size</b>	2mm Nano Ring — Smallest Available
<b>Strand Count</b>	50 or 100 strands per pack	<b>Lengths</b>	14" – 24" available
<b>Installation</b>	Cold Fusion — No Heat, No Glue	<b>Heat Safe</b>	Up to 180°C / 356°F after install
<b>Lifespan</b>	12+ Months with Proper Care	<b>Move-Up</b>	Every 6–8 Weeks Recommended

### Tools Required

<b>Nano Rings (2mm)</b>	Silicone-lined micro rings — match to hair color for invisibility
<b>Loop Applicator</b>	Pulls sectioned hair through the nano ring with precision
<b>Professional Nano Pliers</b>	Clamps ring flat — must be nano-specific to avoid crushing bond
<b>Tail Comb</b>	For clean 1cm upside-down triangle sections
<b>Hair Clips</b>	To hold separated sections while working each row
<b>Color-Matched Nano Tips</b>	Pre-tipped strands — COOVIP offers 60+ shades for seamless blend

### How Many Strands Do I Need?

Strands	Result	Best For
50 strands	Subtle volume & fill	Fine hair, small gaps, fringe area
75 strands	Noticeable volume + length	Medium hair wanting more body
100 strands	Full, natural transformation	Standard full head application
125–150+	Maximum volume & thickness	Thick hair or dramatic length change

■ Always leave a 2cm shadow zone around the entire hairline perimeter. Never place bonds along the edges or flush to the scalp — this prevents traction alopecia and ensures bonds stay completely hidden.

Cold fusion only — no heat, no glue. The 2mm silicone-lined nano ring is clamped flat with professional pliers for a secure, damage-free result that lasts 6–8 weeks before move-up.

STEP 01	STEP 02	STEP 03
 <p><b>Create Horizontal Sections</b> Section hair horizontally leaving a 2cm shadow zone around the entire hairline. Ensures bonds stay hidden and avoids visible placement at the edges.</p>	 <p><b>Take 1cm Upside-Down Triangle Sections</b> Within each row, take 1cm upside-down triangle subsections. Prevents bonds sitting on top of each other in adjacent rows.</p>	 <p><b>Apply Loop Applicator &amp; Nano Ring</b> Thread loop applicator through a nano ring. Pull sectioned hair through, slide ring up to 1–1.5cm from root. Never flush to scalp.</p>
STEP 04	STEP 05	STEP 06
 <p><b>Insert the Nano Bond into the Ring</b> Place pre-tipped nano bond alongside natural hair inside the ring. Both strands must be fully inside before clamping.</p>	 <p><b>Secure with Professional Pliers</b> Clamp ring firmly and evenly with nano-specific pliers. Must be completely flat — not twisted. Check both strands are held.</p>	 <p><b>Complete the Row &amp; Continue</b> Continue along the row at even intervals. Check alignment. Work row by row from nape upward for a seamless, layered result.</p>

### Washing

- Wash 2–3 times per week using sulfate-free, color-safe shampoo.
- Wash in a downward motion — never scrub at the bonds.
- Rinse with cool or lukewarm water. Conditioner on ends only — avoid bonds.

### Brushing & Styling

- Brush from ends upward — hold near the bond while brushing.
- Use a soft-bristle or loop extension brush only.
- Never apply heat directly on nano rings — style below bond area only.
- Sleep in a loose braid on a silk or satin pillowcase.

### Drying

- Air-dry whenever possible, especially around the bond area.
- If blow-drying, use medium heat (max 120°C) with heat protectant.
- Never sleep with wet hair — dry fully to prevent matting at bonds.

### Maintenance

- Move-up every 6–8 weeks as natural hair grows.
- Open rings with pliers, slide down, re-clamp at new position.
- Deep condition every 2 weeks. Avoid chlorine & prolonged sun exposure.

## COOVIP Raw Human Hair vs Standard Extensions

Feature	COOVIP Raw Human Hair	Standard Extensions
<b>Cuticle Layer</b>	100% Intact & Aligned	Stripped or Misaligned
<b>Hair Source</b>	Single Donor	Multiple Donors Mixed
<b>Processing</b>	None — Truly Raw	Acid Bath + Silicone Coat
<b>Bond Visibility</b>	2mm Nano — Virtually Invisible	Larger Bonds, More Visible
<b>Tangle Resistance</b>	Natural — No Coating Needed	Silicone Washes Off Over Time
<b>Color Holding</b>	Even Absorption, Holds Longer	Fades Fast, Turns Brassy
<b>Lifespan</b>	12+ Months	3–6 Months
