

COOVIP Tape-In Extensions — 100% Raw Human Hair | Ultra-Thin 0.8cm Tape | No Heat · No Glue Gun

COOVIP tape-in extensions — color-matched tape tabs in a seamless blonde to ash gradient

COOVIP Tape-In Hair Extensions use an ultra-thin, medical-grade adhesive tape that sandwiches the natural hair for a flat, seamless bond. Built on 100% raw human hair with cuticles fully intact, these extensions deliver natural movement, shine, and long-term reusability — with no heat, no glue gun, and no special tools beyond a comb and tape pliers.

ULTRA-THIN TAPE

0.8cm wide bond —
virtually invisible once sealed

MEDICAL-GRADE ADHESIVE

Latex-free, residue-free —
gentle sandwich method

100% RAW HUMAN HAIR

European donor, double-drawn,
naturally tangle-free

Hair Type	100% Raw European Donor Human Hair	Texture	Natural Straight / Soft Wave When Air-Dried
Weight/Piece	2.5g Standard (2g-3g Custom)	Tape Size	4cm x 0.8cm (3cm x 0.6cm Custom Available)
Application	Sandwich Method — 2 Tapes Per Row (~5g/Row)	Lengths	16" - 32" (Custom Up to 40")
Installation	Cold Sandwich — No Heat, No Glue Gun	Heat Safe	Style Freely Once Installed
Lifespan	2-3 Years With Proper Care	Move-Up	Every 6-8 Weeks Recommended

Tools Required

Tape-In Tabs	Pre-taped, color-matched wefts — ready to sandwich onto natural hair sections
Tail Comb	For clean, horizontal sectioning along the row
Sectioning Clips	To hold separated sections out of the way while working each row
Professional Tape Pliers	Clamps each tape sandwich flat for a secure, even seal
91% Alcohol Spray	Dissolves adhesive cleanly for safe removal and reuse
Replacement Tape	Re-tape and reapply the same hair after each move-up

How Many Rows Do I Need?

Rows	Result	Best For
1 Row	Adds fullness & fills gaps	Thin areas, crown fill
2 Rows	Lengthens & thickens medium hair	Medium length / density
3 Rows	Dramatic length & thickness	Short, thick hair (e.g. bobs)

■ Always leave a 2cm shadow zone around the entire hairline perimeter. Never place tape tabs along the edges or flush to the hairline — this keeps every bond hidden and prevents tension at the perimeter.

Why Raw Human Hair Matters

Raw hair keeps its cuticle layer fully intact and aligned in one direction, so strands glide past each other instead of catching. COOVIP tape-ins are acid-free and silicone-free, processed gently from European donor hair and double-drawn for consistent thickness from root to tip — which is what allows the tape itself to stay thin while the hair underneath holds color and shine for the long term.

Why Choose COOVIP Tape-Ins?

Factory-Direct, 20+ Years

Trusted manufacturer since 2003. Acid-free, silicone-free hair processed gently for tangle-free durability.

Effortless & Reusable

Apply in under an hour by sandwiching hair between tapes. Reuse extensions with replacement tape as hair grows.

Undetectable & Versatile

The thinnest tapes on the market for invisible layering. Wash, cut, curl, or straighten freely.

Ethical & Sustainable

Sourced from European donors, double-drawn for consistent thickness from root to tip.

Sandwich method only — no heat, no glue gun. Each tape pair is clamped flat with professional pliers for a secure, natural-looking result that lasts 6-8 weeks before move-up.

STEP 01

Create Horizontal Sections

Section hair horizontally, leaving a 2cm shadow zone around the entire hairline. Keeps tape tabs hidden and avoids tension at the edges.

STEP 02

Integrate Tape Tab Into the Hairline

Place the first tape tab directly beneath the section, close to the root without touching the scalp.

STEP 03

Seal Application With Professional Pliers

Sandwich the section with the matching tape tab and clamp flat with tape pliers for a secure bond.

STEP 04

Repeat Application

Continue placing sandwiched tape tabs along the row at even, consistent intervals.

STEP 05

Work to a Brick-Work Pattern

Offset each row's tab placement like bricklaying so no tape sits directly above the row beneath it.

STEP 06

Discreet Application

Finish along the hairline and crown with smaller, thinner sections for an undetectable, natural result.

Washing

- Wash 2-3 times per week using sulfate-free, color-safe shampoo.
- Avoid oils and heavy conditioner near the roots — they weaken adhesive bonds.
- Rinse with cool or lukewarm water; condition on ends only.

Drying

- Air-dry whenever possible, especially around the tape area.
- If blow-drying, use medium heat (100-120°C) with heat protectant.
- Never sleep with wet hair — dry fully to prevent matting at the tapes.

Brushing & Styling

- Brush from ends upward, holding near the tape while brushing.
- Use a soft-bristle or loop extension brush only.
- Sleep in a loose braid on a silk or satin pillowcase.

Removal & Reuse

- Spray 91% alcohol on the tape bonds and wait 5 seconds.
- Gently slide the tapes apart — never pull or tug.
- Cleanse with clarifying shampoo, deep condition, then re-tape with COOVIP replacement tape to reuse.

COOVIP Raw Human Hair vs Standard Tape Extensions

Feature	COOVIP Raw Human Hair	Standard Extensions
Cuticle Layer	100% Intact & Aligned	Stripped or Misaligned
Hair Source	Single European Donor	Multiple Donors Mixed
Processing	Acid-Free, Silicone-Free	Acid Bath + Silicone Coat
Tape Adhesive	Medical-Grade, Residue-Free	Generic Adhesive, Sticky Residue
Reusability	Yes — Replace Tape Only	Limited, Tape Often Fails
Tangle Resistance	Natural — No Coating Needed	Silicone Washes Off Over Time
Lifespan	2-3 Years	6-12 Months

Seasonal Care Tips

Summer

- Shield hair from UV to prevent frizz and fading.
- Trim regularly to avoid split ends.
- Apply leave-in conditioner before swimming to guard against chlorine.

Winter

- Use a silk pillowcase to reduce friction overnight.
- Deep condition weekly for extra hydration.
- Brush gently after wearing hats or beanies to prevent matting.
